

What is claimed is:

1. An information registration device, comprising:
a display unit displaying a screen including a common
5 registration area for registering a plurality of types of
different information as unclassified information not
classified for each category; and
a registration unit registering specified information as
the unclassified information when a user performs an operation
10 of specifying arbitrary information on the screen and
registering the information in the registration area.
2. The information registration device according to claim
1, further comprising
15 an access unit accessing the plurality of types of
information registered as the unclassified information in
timing different from a process of said registration unit,
wherein
said display unit displays a reading screen of the
20 unclassified information, and the access unit classifies the
unclassified information for each category, according to a
user's instruction.
3. The information registration device according to claim
25 1, further comprising:
a first storage unit storing information classified for
each category;
a second storage unit collectively storing the
unclassified information; and
30 a management unit storing the specified information in
the second storage unit.
4. A computer-readable storage medium on which is recorded
a program for enabling a computer to execute a process, the
35 process comprising:

displaying a screen including a common registration area for registering a plurality of types of different information as unclassified information not classified for each category; and

5 registering specified information as the unclassified information when a user performs an operation of specifying arbitrary information on the screen and registering the information in the registration area.

10 5. The storage medium according to claim 4, wherein
 the computer registers screen objects including an icon, an Internet address, a text and a file on the screen as the unclassified information.

15 6. The storage medium according to claim 4, wherein
 when the specified information coincides with already registered information, the computer accepts the specified information by handling the already registered information as an entity and outputs no inquiry message to the user.

20 7. The storage medium according to claim 4, wherein
 even when the specified information could not be registered, the computer performs no error indication accompanying an interaction with the user.

25 8. The storage medium according to claim 4, the process further comprising:

 accessing the plurality of types of information registered as the unclassified information in timing different
30 from the registering the specified information;

 displaying a reading screen of the unclassified information; and

 classifying the unclassified information for each category, according to a user' instruction.

9. A computer-readable storage medium on which is recorded a program for enabling a computer to execute a process, the process comprising:

5 storing arbitrary information in a first storage unit
storing information classified for each category, when a user performs an operation of specifying a category and registering the information; and

10 storing specified information in a second storage unit
collectively storing unclassified information not classified for each category when a user performs an operation of specifying arbitrary information and registering the information in a common registration area for registering a plurality of types of different information as the unclassified information.

15

10. The storage medium according to claim 9, the process further comprising:

20 evaluating the plurality of types of information registered as the unclassified information in the second storage unit according to an evaluation criterion based on a behavior history of each user; and

selecting information suitable for a specific user from the evaluated unclassified information and providing the information.

25
